SUMMARY

Awarded **Rising Star of the Quarter (Oct–Dec 2025)** for delivering a 40+ server cloud migration and improving deployment speed by **87.5%** via GitLab CI/CD. Brings **3 years of production experience** in AWS, Kubernetes (EKS), and DevSecOps — building and maintaining CI/CD pipelines with integrated security scanning (image scanning, vulnerability scanning), ensuring **99.9% uptime** through observability with Prometheus and Grafana, and achieving **40% cloud cost optimisation** across production infrastructure.

WORK EXPERIENCE

DevOps Engineer · Experience Commerce

June 2025 – Present *(9 mos)*

- Migrated **40+ servers** & **5+** databases from Alibaba Cloud to AWS using a controlled cutover approach, leveraging **cross-account IAM roles** and **dedicated AWS organisation accounts per environment** to ensure isolation, security, and zero-downtime transition
- Set up **AWS EKS**; deployed workloads via **Helm** (Deployments, Services, Ingress); enforced **RBAC + Network Policies** for namespace isolation and least-privilege access
- Architected **self-hosted GitLab CI/CD** for **10+ teams** with **Trivy** image scanning — cut deployment cycles from 2 hrs to 15 mins (**87.5%** faster)
- Built observability stack (**Zabbix, Datadog, Prometheus + Grafana**) across **40+** servers with **50+** alerts — **99.9% uptime SLA** and proactive incident detection
- Containerised **15+** legacy apps (.NET, PHP, Drupal) with Docker + Nginx; deployed **ASG + ALB + WAF** for autoscaling and traffic security
- Cut cloud costs **40%** via EC2 rightsizing, ASG policies & S3 lifecycle rules; all environments provisioned with **Terraform + Ansible**

🏆 **Rising Star of the Quarter — Oct–Dec 2025** | Recognised for Alibaba→AWS migration delivery, GitLab DevSecOps rollout, and cross-team impact

Cloud DevOps Engineer · GetToHire.com

June 2023 – April 2025 *(22 mos)*

- Maintained production AWS infra (EC2, S3, RDS, VPC, CloudFront) — **99.9% uptime** serving **50K+** concurrent users
- Migrated source code to **self-hosted GitLab**; built GitLab CI/CD pipelines — deployment time reduced **70%**, enabling daily releases
- **Terraform** IaC for dev & staging — provisioned EC2, S3, RDS, VPC, subnets; **Certbot** automated SSL/TLS across multiple subdomains
- Set up **Zabbix + Uptime Kuma** monitoring & alerting; **CloudFront + S3 CDN** for static assets; EC2 Security Group hardening across all environments
- **Prometheus + Grafana + ELK** observability — MTTR reduced **40%**; managed **Route 53** DNS & subdomain config for **10+** projects

DevOps Intern · GetToHire.com

Feb 2023 – May 2023 *(4 mos)*

- Gained hands-on exposure to **EC2, S3, RDS, VPC, IAM, Route 53** — deployed applications on EC2 with Security Groups, IAM roles, and basic networking; set up **Zabbix** monitoring with alerts
- Learned **Git + GitLab** for version control and CI/CD workflows; practised **Docker** containerisation — built images, managed containers, and understood application deployment workflows

PROJECTS

EKS-InfraManager [GitHub] — Three-Tier Application on AWS EKS — Kubernetes, IaC, Monitoring

- Deployed a three-tier application on **AWS EKS** using Kubernetes, with service exposure via **AWS Load Balancer Controller**
- Implemented Kubernetes resources (Deployments, Services) and troubleshot pod and service issues across environments
- Provisioned infrastructure using **Terraform**; integrated **Prometheus + Grafana** with dashboards and alert rules for resource and application metrics

Stack: AWS EKS · Kubernetes · Terraform · Docker · Prometheus · Grafana · AWS Load Balancer Controller

SecureNode CI/CD [GitHub] — CI/CD Pipeline with DevSecOps — GitHub Actions, Jenkins, Docker

- Built CI/CD pipelines using **GitHub Actions and Jenkins** for automated build, test, and deployment workflows
- Integrated security scanning (**Trivy, OWASP ZAP**) into pipelines to detect vulnerabilities before deployment
- Implemented Docker-based builds and deployments; enabled monitoring with **Prometheus + Grafana**, including dashboards and alerting setup

Stack: Node.js · Jenkins · GitHub Actions · Docker · Trivy · OWASP ZAP · Prometheus · Grafana

TECHNICAL SKILLS

Cloud (AWS): EC2, S3, RDS, VPC, IAM, CloudFront, CloudWatch, WAF, SQS, Lambda
Containers & K8s: Docker, Kubernetes (RBAC, Network Policies, HPA, StatefulSets, Ingress), Helm, EKS
CI/CD & DevSecOps: Jenkins, GitLab CI, GitHub Actions, Trivy, OWASP ZAP, Security Scanning, Security Gates
Monitoring: Prometheus, Grafana, Datadog, ELK Stack, CloudWatch, Alertmanager
IaC & Scripting: Terraform, Ansible, Bash, Shell, Python, YAML, JSON
Databases: PostgreSQL, MySQL, MongoDB, RDS
Security & Networking: IAM, RBAC, Network Policies, VPC, SSL/TLS, WAF, VPN, Firewalls, Nginx, Linux

EDUCATION

B.E. in Computer Engineering

Sinhagad Institute of Technology, Pune · CGPA: 8.5 / 10 · Graduated July 2023

TRAININGS

AWS Solutions Architect – Associate (Eduleem School of IT, Bengaluru) · DevOps Training (Besant Technologies, Bengaluru)
